

Threat Assessment — Entities of Interest, Staffordshire

Preliminary profiles compiled from public records and initial surveillance. All assessments are provisional. Further investigation required.

01 — Birmingham Museum and Art Gallery

STATUS: **ACTIVE (Unaware)**

PUBLIC PROFILE: A major regional museum holding the Staffordshire Hoard — approximately 3,500 pieces of Anglo-Saxon gold, garnet, and silver recovered from a site near Lichfield in 1984. The hoard's excavation site is within the geographical area of current interest. The museum is a public institution governed by a board of trustees, funded through public grants and admission revenue. It employs civilian academic, curatorial, and security staff. The collection is legally protected under UK heritage legislation. The museum has no known connection to any activity beyond its public mandate of conservation, research, and display. Its staff are not security-cleared and are unaware of any investigation.

KNOWN ACTIVITY: Standard museum operations — public exhibition, academic research, conservation. No unusual activity reported. The museum's Anglo-Saxon gallery curator (Dr. Helen Price) and night security staff (Mr. Samuel Okonkwo) have been identified as potential sources of information should engagement become necessary.

ASSESSMENT: The museum is a civilian institution — not an adversary. Its collection may contain items of contextual relevance to the current anomalies. Diplomatic or academic engagement is the preferred approach. The museum's legal protections and public accountability mean any attempt to access or remove collection items would face significant legal obstacles.

02 — Vatican Apostolic Archive

STATUS: **ACTIVE (Unaware)**

PUBLIC PROFILE: The central archival repository of the Holy See, Vatican City, Rome. The archive holds administrative records spanning two millennia, including documents from the Roman administration of Britain (1st-5th centuries CE). A preliminary catalogue search suggests one ledger — catalogued under "Roman Britain, Trade Records" — may reference financial transactions in the Staffordshire region during the 1st century CE. The ledger's content and relevance are unconfirmed without physical access. The archive's access procedures require scholarly credentials and have a standard six-week processing backlog. The archive is not aware of any investigation and has no known connection to current events.

KNOWN ACTIVITY: Standard archival operations — document preservation, cataloguing, and supervised researcher access. No unusual activity reported. A senior archivist (Father Matteo, 22 years of service) may be able to expedite access for qualified researchers.

ASSESSMENT: Potential source of historical documentation from the Roman period relevant to the geographical area of interest. Access timeline (6 weeks standard) is a significant operational constraint. Ecclesiastical or academic channels may provide faster access. The archive is a neutral repository — not an adversary.

03 — British Ministry of Agriculture (Potential Future Involvement)

STATUS: **DORMANT — Not Currently Involved**

PUBLIC PROFILE: The UK government department responsible for agricultural regulation, including crop health, pest management, soil quality, and water safety. The Ministry has statutory authority to investigate agricultural anomalies and, if necessary, impose quarantine or remediation measures. The Ministry is a civilian regulatory agency — its personnel are scientists and administrators, not law enforcement or security. The Ministry has no known connection to any investigation and is unaware of the current situation.

KNOWN ACTIVITY: The Ministry is not currently involved. However, if the environmental anomalies at the agricultural property under investigation (crop distress, insect behavior, water quality) are reported to authorities — by local residents, the missing farmer's family, or routine inspection — the Ministry would have grounds to initiate an investigation. An agricultural investigator (likely portfolio match: Mr. Philip Croft, 18 years of service) would be the probable responding officer. A Ministry investigation could result in site quarantine, restricting access to the affected area.

ASSESSMENT: A potential complicating factor, not an adversary. Ministry involvement would be a bureaucratic obstacle, not a security threat. Maintaining a low profile at the affected site reduces the probability of Ministry activation. If Ministry investigators become involved, discreet cooperation may be preferable to confrontation.

04 — Arthur Dunn (Missing Landowner)

STATUS: **ACTIVE — Unaccounted For**

PUBLIC PROFILE: Arthur Dunn, age estimated mid-50s, is the registered owner of the agricultural property in rural Staffordshire that is the epicenter of anomalous environmental indicators. Land registry records confirm sole proprietorship. No criminal record. Described by local residents as a private individual who maintained regular but limited social contact — primarily Thursday evenings at the Plough and Furrow public house. Mr. Dunn reportedly discovered an object — described variously by witnesses — in his north field approximately two to three weeks ago. He showed this object to several pub regulars and stated his intention to travel to Scotland for a fishing trip. He has not been heard from since.

KNOWN ACTIVITY: Last confirmed sighting: approximately two weeks ago at the Plough and Furrow. Stated destination: Scotland (fishing trip) — unconfirmed. Post has accumulated at his property. His vehicle was not observed at the property during the most recent surveillance pass (aerial). The object he reportedly discovered is not at the property (preliminary assessment based on site observation). Mr. Dunn's current whereabouts are unknown.

ASSESSMENT: Key person of interest — locating Mr. Dunn is a priority investigative objective. His reported discovery and subsequent disappearance are temporally linked to the onset of anomalous environmental indicators. He is not assessed as hostile. He may be a civilian who inadvertently became involved in events he does not understand, or his disappearance may be voluntary and unrelated. His testimony — if he can be located — may be the most direct source of information about what he discovered and where it is now.

Additional entities of interest may be identified as the investigation proceeds. This assessment reflects information available at case initiation only. All assessments are provisional and subject to revision with new intelligence.
