

COVENANT EYES ONLY — FIELD COPY

Preliminary Site Assessments — Central Europe

Seven sites identified for initial survey. Assessments compiled from public records, satellite imagery, and advance reconnaissance. Analysis pending.

L1 — Prague Castle Chapel Museum, Hradčany

L1

PRELIMINARY ASSESSMENT

A small museum housed in a former chapel on the Prague Castle grounds. The museum displays objects associated with the Defenestration of 1618 and the Thirty Years' War. The facility consists of three rooms: a main hall containing the defenestration window, a side gallery of religious artifacts, and a curatorial office. The museum is described in public records as underfunded and staffed by two elderly docents and a part-time curator. An iron crucifix of interest was reportedly displayed in a glass case in the side gallery prior to recent events. Current status of the display is unconfirmed. The museum is accessible to the public during standard castle hours.

Accessibility: Day shifts only. Public access — enter as tourists. Closed Evening and Night. Museum staff: limited, likely cooperative if engaged appropriately.

Assessment: Site of confirmed interest. The display case and museum records may contain information about the object and the timeline of events. **Source:** public records, tourist information, satellite imagery.

L2 — Retirement Facility, Brno

L2

PRELIMINARY ASSESSMENT

A state-run retirement facility in Brno, approximately two hours east of Prague. Public records describe the facility as clean, institutional, and operating under standard Czech social services protocols. Room 314 is occupied by a resident of potential interest — an elderly female, age 82, whose family name appears in historical records connected to the object of interest. The resident's room is reported to contain family documents including letters and a hand-drawn family tree. The facility maintains standard visiting hours and staff are described in assessment reports as indifferent to visitor identity. The resident's mental state is assessed as sharp and alert per available medical records.

Accessibility: Day and Evening shifts. Visiting hours end at 8 PM. Agents may pass as relatives — staff verification is minimal. The resident is reportedly receptive to visitors who show genuine interest in family history.

Assessment: Site of high potential interest. The resident may possess generational knowledge about the object and its provenance. Engagement should be handled with respect and patience. **Source:** public records, facility registry, preliminary background check.

L3 — Private Antiquities Gallery, Vienna First District

L3

PRELIMINARY ASSESSMENT

A private antiquities dealership operating in Vienna's wealthy First District. The business is described as appointment-only, specializing in objects with "special provenance" — a term flagged in Covenant intelligence as a euphemism for items with questionable ownership histories. The premises include a front gallery, an office, and a back room with reinforced door and soundproofing — configuration consistent with high-value private transactions. The proprietor is identified through business registry as Dieter Heller, Austrian national. The gallery's client list is not publicly accessible. Financial records indicate frequent transactions with entities operating across Central European borders.

Accessibility: Day and Evening shifts. Appointments required — agents must pose as buyers or use credentials. Night access requires infiltration. The proprietor is assessed as risk-averse and may be receptive to cooperative engagement.

Assessment: Site of potential interest. The gallery's specialization and location make it a probable node in the object's movement chain. The proprietor may possess direct knowledge of recent transactions. **Source:** business registry, Covenant intelligence, external observation.

L4 — Private Bank, Munich Central District

L4

PRELIMINARY ASSESSMENT

A private banking institution in central Munich offering anonymous safe deposit services. The facility is described as a traditional European bank — marble interiors, brass fixtures, high discretion. A specific safe deposit box of interest has been identified through financial intelligence channels, rented under a name believed to be an alias. The box was leased approximately three weeks before case initiation — timing consistent with the object's known movement timeline. The vault is underground, time-locked, and guarded. The bank maintains strict client confidentiality and will require legal instrument or operational intervention for access to rental records or box contents.

Accessibility: Day shifts only. Vault access requires key + manager cooperation or technical infiltration. Evening/Night requires black-bag operation. Bank security: professional, discreet, but not militarized.

Assessment: Site of confirmed interest. The box may contain physical evidence of the object's recent handling and movement, as well as contact information for associated persons of interest. **Source:** financial intelligence, rental records (partial), bank observation.

L5 — Private Aviation Terminal, Zurich Airport

L5

PRELIMINARY ASSESSMENT

A discreet fixed-base operator (FBO) serving private aircraft at Zurich International Airport. The facility provides private lounges, refueling, and ground services for executive and charter aviation. Flight logs are maintained but not publicly accessible. The terminal is staffed continuously and serves a clientele that values discretion. Preliminary intelligence indicates a meeting of potential relevance occurred at this location — a private aircraft arrival within the timeframe of interest, with flight plan originating from the United States. The terminal staff are reported to be professional and well-compensated for discretion. The tail number of the aircraft in question has been partially identified through air traffic records.

Accessibility: All shifts. Terminal is always staffed. Public access to café area — agents may pose as travelers. Flight logs require credentials or financial inducement. Staff are discreet but not hostile — standard investigative approaches apply.

Assessment: Site of potential interest. Flight records may identify the buyer's intermediary and confirm the buyer's identity and origin. Source: air traffic records, satellite imagery, preliminary financial intelligence.

L6 — Remote Clearing, Šumava National Park (Bohemian Forest)

L6

PRELIMINARY ASSESSMENT

A remote forest clearing deep within the Šumava National Park, near the West German border. The site is accessible only by hiking trail — no roads, no facilities. Historical records reference a pre-Christian religious site at this approximate location, demolished in the 11th century. Foundation stones are reported to remain at the site — weathered granite blocks, partially buried under moss and fallen leaves. The site is described in regional folklore as "cold even in summer." Preliminary environmental assessment notes an absence of typical forest wildlife activity in the immediate vicinity — no birdsong, no animal tracks. Metal detection surveys have not been conducted. The site's isolation and limited access make it suitable for discreet visitation but logistically demanding.

Accessibility: All shifts. Accessible by hiking trail only — approximately 2 shifts travel from Prague, 1 shift from the nearest lodging. No roads, no facilities, no lighting. Agents must carry in all equipment. Exercise standard wilderness precautions.

Assessment: Site of high potential interest. Historical association with pre-Christian metallurgy may be relevant to the object's material origin. Geological survey recommended. **Source:** historical records, regional folklore, terrain analysis, satellite imagery.

L7 — Remote Hunting Lodge, Bavarian Forest

L7

PRELIMINARY ASSESSMENT

A remote stone-and-timber hunting lodge located approximately 3 km from the West German-Czech border, deep in the Bavarian Forest. The structure is a two-story building with a stone fireplace, mounted antlers, heavy wooden furniture, and a basement cold-storage room. The nearest village is approximately 12 km distant. Access is via a single unpaved forest road. Property records indicate ownership through a shell company — the beneficial owner is unknown and under investigation. The lodge's isolation, cross-border proximity, and corporate ownership structure are consistent with a location prepared for sensitive transactions. No recent activity has been confirmed at the site — current occupancy unknown.

Availability: Location and access route currently unconfirmed. If identified: accessible via single forest road, 1 shift from Munich, 1 shift from the shrine site. No immediate neighbors. No police presence. Exercise caution — approach routes are limited and exposed.

Assessment: Site of potential operational significance. Isolation and ownership structure suggest use as a meeting or exchange location. Location confirmation is a priority. **Source:** property records (partial), satellite imagery, terrain analysis.
