

Background Check Summaries — Cormsil, Yorkshire

Preliminary profiles compiled from public records, surveillance, and open-source intelligence. Verification in progress.

NP01 — Eleanor Vane

OCCUPATION Librarian —
Cormsil Public Library
(Former)

OBSERVED DEMEANOR Exhausted, fragile, appears desperate for non-local
conversation

PHYSICAL DESCRIPTION English female, early 60s. Iron-grey hair, glasses, typically observed wearing a cardigan. Posture is stooped — consistent with fatigue. Facial expression: hollow, with visible signs of sustained sleep deprivation (dark circles, pallor, hand tremor). Curtains at her residence remain drawn during daylight hours. The subject rarely leaves her cottage. When receiving visitors, she sits in an armchair and does not rise. The subject's physical condition is described as declining — she was previously an active, mobile individual per local accounts.

BACKGROUND (PUBLIC RECORDS) Eleanor Vane, age estimated early 60s, is listed in civil records as a resident of Cormsil and was employed as the librarian at the Cormsil Public Library until its destruction by fire approximately three weeks ago. Employment history: Cormsil Public Library, duration unknown (estimated 20+ years based on local accounts). No criminal record. Marital status: widowed (spouse deceased, date unknown). No children. The subject is believed to have been present at or near the library on the night of the fire — her proximity to the event is unconfirmed but probable given her role. She has not made any public statement about the fire. She is reported to receive daily visitors at her cottage — the identity and purpose of these visitors is under investigation. The subject's testimony may be the most direct source of information about the fire and its circumstances.

ASSESSMENT Key witness — priority interview subject. Physical and psychological condition suggest vulnerability; approach with care. The subject is not a suspect and is assessed as cooperative. Daily visitor pattern is anomalous and warrants investigation. Source reliability: public records (high), local accounts (unconfirmed), surveillance (preliminary).

NPC2 — Tom Dwerryhouse

OCCUPATION Farmer — Landowner OBSERVED Demeanor Gruff, observant, appears to be documenting something

PHYSICAL DESCRIPTION English male, early 50s. Flat cap, worn outdoor coat, practical work clothing. Weather-beaten complexion consistent with decades of outdoor agricultural labor. Build stocky. Posture and movement: deliberate, watchful. Subject has been observed visiting a standing stone on his property daily — behavior described by local sources as recent. He carries a small notebook and has been observed writing in it during these visits. Facial expression: suspicious, assessing — the look of a man who has been living with something he cannot explain for several weeks.

BACKGROUND (PUBLIC RECORDS) Tom Dwerryhouse, age estimated early 50s, is a farmer and landowner in Cornsil. Land registry confirms ownership of the field containing the standing stone (see L7). Married to Mary Dwerryhouse — marriage record confirmed, civil registration. No criminal record. The subject is described by local sources as the most vocal of a faction of Cornsil residents skeptical of the "miracle" narrative reportedly circulating in the village regarding recent events (specifics of this narrative are under investigation). The subject's wife, Mary, is reported to have been involved in the library fire — specifics unconfirmed. The subject's recent behavioral change (daily visits to the standing stone, note-taking) is noted. He is not known to have any connection to activities beyond his farming occupation.

ASSESSMENT Potential source of detailed local observations. Skeptical disposition may make him receptive to factual investigation. Recent behavioral change (stone visits, note-taking) is of interest — his notes may contain observations relevant to the investigation. Approached with respect, assessed as cooperative. Source reliability: public records (high), local accounts (unconfirmed).

NPC3 — Reverend Paul Threlfall

OCCUPATION Vicar — St.
Cuthbert's Church, Cormsil

OBSERVED DEMEANOR Kind, anxious, appears to be waiting for external assistance

PHYSICAL DESCRIPTION English male, early 40s. Clerical collar, dark shirt, practical attire — the slightly rumpled appearance of a rural vicar. Build average. Facial expression: kind but worried, the look of a conscientious man carrying a burden he cannot name. Subject has been observed standing in the doorway of St. Cuthbert's Church, looking out at the village. Posture suggests anticipation — as though waiting for someone. The subject's demeanor in conversation is described as warm but anxious.

BACKGROUND (PUBLIC RECORDS) Reverend Paul Threlfall, age estimated early 40s, is the sitting vicar of St. Cuthbert's Church, Cormsil — approximately 12 years in post. Ordained Church of England. No disciplinary record. Married, two children. The subject holds the keys to St. Cuthbert's Church and crypt and has authority over parish records dating to the 19th century. He is reported by local sources to have expressed concern about "something under the church" — the nature of this concern is unknown and may be metaphorical (spiritual) or literal (structural). The subject's predecessor's predecessor reportedly mentioned a "loose stone" in the crypt — this reference has not been verified. The subject is not known to have any connection to activities beyond his ecclesiastical duties.

ASSESSMENT Potential facilitator of access to church, crypt, and parish records. The subject's anxiety and reported statements suggest he may be receptive to external assistance. Assessed as cooperative — approach with respect for his position and faith. Source reliability: public records (high), Church of England directory (confirmed).

NPC4 — Mary Dwerryhouse

OCCUPATION Farm Wife —
Reported Library Fire
Survivor

OBSERVED DEMEANOR Gentle, vague, behavior described as "slightly off" by local sources

PHYSICAL DESCRIPTION English female, early 50s. Practical dress — farm wife attire. Gentle facial expression, soft-spoken per local accounts. Hands show signs of decades of manual work. Photographed from distance across the village green — appears physically normal at first glance. On closer observation, her posture is described as unusually stiff, and her blinking pattern is described as unnaturally regular. These behavioral observations are subjective and unverified. Her husband, Tom Dwerryhouse (NPC2), has reportedly been documenting her behavior in a notebook — the content of these notes is unknown.

BACKGROUND (PUBLIC RECORDS) Mary Dwerryhouse, age estimated early 50s, is the wife of Tom Dwerryhouse (NPC2). Civil marriage record confirmed. No criminal record. No employment listed — farm wife, assisting with family agricultural operation. The subject is reportedly one of multiple Cornsil residents who were involved in the library fire three weeks ago — the exact number of individuals involved, the nature of their involvement, and their current status is under investigation. Local accounts are contradictory: some describe the individuals as survivors of a tragedy, others describe them as having "returned" from an unspecified state. These accounts are unverified and may reflect local rumor rather than fact. The subject currently resides at the Dwerryhouse farm and is reportedly going about her daily life.

ASSESSMENT Witness of interest. The subject's reported presence at the library fire makes her a potential source of testimony. Behavioral anomalies — if confirmed — may be attributable to trauma from the fire event. Approach with care and standard interview protocols. Source reliability: public records (high), local accounts (contradictory, unverified).

NPC5 — Margaret Hale

OCCUPATION Schoolteacher — OBSERVED Demeanor Composed, analytical, observant of other survivors
Reported Library Fire
Survivor

PHYSICAL DESCRIPTION English female, early 40s. Neat, professional appearance — pressed blouse, hair pulled back, presentation consistent with a schoolteacher's standards. Posture is composed and upright. Facial expression: thoughtful, assessing — she has been observed watching other individuals (reportedly other fire survivors) with an analytical expression. She has been observed standing near the burned library site on multiple occasions, looking at the ruins. Unlike other reported survivors, she appears fully alert and oriented.

BACKGROUND (PUBLIC RECORDS) Margaret Hale, age estimated early 40s, is listed as a resident of Cornsil and is employed as a teacher at the Cornsil primary school. Teaching certification confirmed via General Teaching Council registry. No criminal record. Single, no children. The subject is reportedly one of the individuals involved in the library fire. She appears to be more alert and communicative than other reported survivors based on preliminary observation. She has not made any public statement about the fire. The subject may have been observing other reported survivors systematically — this is inferred from surveillance and requires confirmation through interview.

ASSESSMENT Potential key witness — her apparent lucidity and observational behavior distinguish her from other reported survivors. May provide more coherent testimony than other witnesses. Approach with standard interview protocols. Source reliability: public records (high), surveillance (preliminary).

NPC6 — Subterranean Anomaly (Environmental Assessment)

CLASSIFICATIONEnvironmental
Anomaly — Subterranean
Origin — Nature Unknown

INDICATORSThermal, acoustic, and possibly seismic — instrument data under analysis

DESCRIPTION OF INDICATORSInstrument readings from the Cormsil area indicate anomalous subsurface activity — specifics are under analysis. The signal is consistent with a subterranean source of unknown nature. Possible explanations include: geothermal activity (no known geothermal features in this region); seismic stress (no tectonic activity reported); underground water flow (possible but inconsistent with signal characteristics); or human activity (mining, drilling — no permits on file for this area). The signal characteristics do not match standard geological profiles. The anomaly appears to be localized — centered beneath the Cormsil area, with diminishing intensity at distance. Long-exposure imagery of the standing stone (L7) captured a faint luminosity around the stone at twilight — this may be a sensor artifact, bioluminescence, or reflected light. The imagery is inconclusive. The standing stone's soil temperature is elevated relative to ambient — confirmed by thermal imaging. The radius of temperature elevation matches the radius of dead vegetation around the stone. The anomaly predates the library fire — baseline readings suggest activity began approximately three to four weeks ago, intensifying gradually.

ASSESSMENTThe subterranean anomaly is the primary environmental indicator driving this investigation. Its nature is unknown. It is location-bound (subsurface, Cormsil area). Instrument readings do not match standard geological or human-activity profiles. Further instrumented analysis is required. Do not attempt direct physical investigation of the subsurface source without specialist assessment. Source reliability: instrument data (confirmed), thermal imaging (confirmed), visual imagery (inconclusive).

NPC7 — Sir Geoffrey Colne (Historical Figure, 1609-1673)

OCCUPATION17th-Century
Antiquarian and Scholar
(Deceased)

RELEVANCEHistorical — Author of manuscript potentially relevant to Cormsil
area

DESCRIPTIONThis is not a photograph of a living person. It is a reproduction of a 17th-century engraved portrait — the frontispiece from Colne's published works. The portrait depicts a man in Cavalier-era attire (lace collar, long hair, mustache), holding a manuscript and quill. Expression is formal and scholarly. Colne was a respected antiquarian of his period — his published works cover Roman Britain, Anglo-Saxon England, and regional folklore. He was a fellow of the Royal Society (elected 1663) and corresponded with other scholars of his era.

BACKGROUND (PUBLIC RECORDS)Sir Geoffrey Colne (1609-1673) was a 17th-century English antiquarian, scholar, and fellow of the Royal Society. His published works include studies of Roman Britain and Anglo-Saxon material culture. An unpublished manuscript — "Of Certain Subterranean Presences in the County of York" (1642) — is held in the British Library manuscript collection. The manuscript is catalogued as a study of local folklore and unusual occurrences in Yorkshire, with particular reference to a site near the modern village of Cormsil. Colne is not known to have had any affiliation with intelligence or security organizations — he was an independent scholar. The manuscript's relevance to current events is unknown but its geographical focus on the Cormsil area is noted. Colne's methodology as a scholar was regarded as rigorous for his period.

ASSESSMENTHistorical figure — relevant only through his manuscript. The manuscript may provide 17th-century context for phenomena that predate modern Cormsil. Access to the manuscript requires a British Library reader's card and supervised reading room access. Source reliability: historical records (high), academic references (confirmed).

NPC8 — Unidentified Organization ("The Society" — Historical Reference Only)

CLASSIFICATIONHistorical
Reference — Organization of
Unknown Nature and Present
Status

INFORMATION QUALITYFragmentary — single historical reference, unverified

DESCRIPTION OF REFERENCEThis is not a photograph of people. It is a grainy surveillance image of a Victorian building — possibly a London townhouse — sourced from a historical archive. The building's architectural style is consistent with the late 19th century. All curtains are drawn. A brass plaque by the door is illegible in the image. The building appears maintained but unoccupied — no visible activity, no accumulated post, no broken windows. The image was captured from across the street. The photographer's identity and purpose are unknown. The image is of unknown provenance and may be unrelated to the entity referenced as "The Society."

BACKGROUND (FRAGMENTARY)A single historical reference — the brass label on the display case at the burned Cornsil library — mentions a "Cornsil Compact" dated 1882 and attributes it to "The Society." No further information about this organization has been located in public records. The reference suggests that an organization — name unknown beyond the generic "The Society" — was involved in an agreement or document ("compact") in Cornsil in 1882. The nature of this agreement, the identity and purpose of the organization, and its present status (if it still exists) are entirely unknown. The organization may have been: a local civic group; a religious organization; an academic society; a private club; or something else. The reference is a single data point and cannot be assessed for reliability or significance.

ASSESSMENTUnknown. The reference is fragmentary and unverified. The organization's connection — if any — to current events cannot be assessed. Further historical research may identify "The Society" and the nature of the 1882 compact. Do not assume the organization is hostile, cooperative, or still extant. Source reliability: single historical reference (unverified, fragmentary).
